

AKEELAH TRADING ACADEMY

Download & Installation

From ZIP download to a validated license

Customer edition | Applies to the current release

Keep this guide with your downloaded extension. Use Simulation mode before enabling real execution.

1. Download and choose the right folder

Download the customer package from tradingacademy.akeelah.io/fomo-auto-trader-download.html. Use the official Akeelah link. The download page lists the current release and its SHA-256 checksum. This is a desktop unpacked Chrome extension; it is not a Chrome Web Store listing or a phone app.

Requirements: current desktop Google Chrome (version 116 or newer), internet access, a signed-in FOMO account using the English interface, and an active Akeelah license. Brave may also load unpacked extensions, but it is not part of Akeelah's installation testing.

1. Save the ZIP to your computer. On Windows, right-click it and choose Extract All. On macOS, double-click the ZIP.
2. Move the extracted folder to a permanent location. Do not run the extension from inside the ZIP, and do not delete this folder after installation.
3. Open the extracted customer package folder. Its **extension** folder contains manifest.json; that is the folder Chrome needs.
4. The docs folder contains this download guide, the operating manual, feature guide, and sales terms.

Customer package folder	What it contains
extension/manifest.json	Select extension/ when loading unpacked
docs/	Four customer PDF guides
START-HERE.txt	Quick-start sequence and official links
CHECKSUMS.sha256	File integrity reference

If you download the extension-only ZIP, its extracted root contains manifest.json. Select that root instead.

2. Install in Chrome

1. Type `chrome://extensions` into Chrome's address bar.
2. Turn on Developer mode in the upper-right corner.
3. Click Load unpacked.
4. Select the extracted extension folder containing `manifest.json`, then choose Select Folder.
5. Confirm that Chrome displays Akeelah FOMO Manager with no red error badge. The version shown on the card should match the release listed on the download page.
6. Use Chrome's Extensions menu (puzzle-piece button) to pin Akeelah for easy access. Reload existing FOMO and Telegram Web tabs.

Chrome must be able to read the extracted files whenever it starts. An organization-managed browser may prohibit unpacked extensions; contact your administrator rather than attempting to bypass that policy.

A fresh installation starts in SIMULATION. Use the OFF / SIMULATION / LIVE control; choosing LIVE asks for confirmation. Updates preserve the existing mode. Review warning overrides and every saved order before testing or trading.

Installation problems: “Manifest file is missing” usually means you selected the parent folder or the ZIP. Choose the folder that directly contains `manifest.json`. If it disappears after a reboot, restore the folder to its original permanent location.

3. Activate your purchased license

1. After Stripe checkout, continue to the Akeelah activation page. Use the same purchase email.
2. Open FOMO while signed in. Look for the Akeelah identity section on the token page. It reports the authenticated FOMO User ID after FOMO makes a balance request. This is the long account identifier, not your username or wallet contract.
3. Copy the correct ID into the activation form. The FOMO username field is optional.
4. Click Activate My FOMO Manager. Save the full issued key securely; it is shown only when first generated.
5. Open the extension settings. Paste the key into License Key and click Save / Validate License. Confirm LICENSE AUTHORIZED and the correct tier.

The screenshot shows the Akeelah Trading Academy activation interface. At the top, the logo 'AKEELAH TRADING ACADEMY' is visible on the left, and 'Home' and 'Products' links are on the right. The main form area has a dark background with white text. It contains fields for 'Purchase Email' (akeelahllc+retailacceptanceessential@gmail.com), 'FOMO User ID' (akeelah-retail-browser-essential-20261002), and 'FOMO Username (optional)' (retail-browser-test). Below these fields is a yellow button labeled 'Activate My Auto Trader'. Underneath the button, there is a link to 'Manage billing, payment method, invoices or cancellation · Contact support'. The 'Activation Successful' section displays the 'PLAN' as 'ESSENTIAL' and the 'FOMO USER ID' as 'akeelah-retail-browser-essential-20261002'. A message states 'License already activated. Key ending in 3SIT' and 'Your subscription is active and this FOMO account is now bound to your Akeelah Auto Trader license.' At the bottom, there is a link 'Lost your license key? Email me a reset link' and a note: 'A reset creates a new key and invalidates your previous key.'

Actual sandbox acceptance screenshot: Essential activation succeeded. The account information shown is test data.

One paid license binds to one FOMO account. If the identity does not appear, open a token page, allow the page and balance panel to load, and reload it once. Contact support with the error and your purchase email if the ID still cannot be detected.

4. Make your first test before Live mode

1. Select SIMULATION in the mode control. Turn risk-warning, high-price-impact and high-fee overrides off for the first test.
2. Open a FOMO token page. Choose Auto Order, the correct Buy or Sell workflow, and a small example order.
3. Confirm that the mode bar says SIMULATION. OFF stops monitored orders and Telegram auto-buys.
4. Use Simulate (no execution). Review token, network, amount, direction, warnings and Activity Log.
5. Check FOMO holdings independently: simulation must not change the balance. A simulated Executed result is not a filled trade.
6. Remove test orders and review armed instructions before selecting LIVE. Elite also has a separate Simulate Telegram trades setting; keep it checked during setup.

5. Update, recover, cancel and get help

Update: select OFF in Akeelah, stop automatic Telegram entries, and note your active orders. Back up the existing extracted folder. Extract the new release into the same permanent extension folder and click the extension card's Reload button in `chrome://extensions`. Reload FOMO/Telegram tabs; verify the version, license, settings and order list; choose SIMULATION and test before returning to LIVE. Keeping the same loaded path preserves the extension identity and saved local settings. Removing the extension first can delete saved state. Never install an older release over a newer one.

Recover a key: go to the activation page, enter the purchase email, and click Lost your license key? Email me a reset link. Open the newest email from `contact@akeelah.io` within 30 minutes. Completing the reset issues a new key and invalidates the old key while retaining the account binding. Save and validate the new key in the extension.

Cancel: use Manage billing, sign in with the purchase email, select the subscription and cancel before renewal. Access continues through the paid billing period. Uninstalling the extension, closing Chrome, or turning Akeelah off does not cancel Stripe billing.

Support: email `contact@akeelah.io` with purchase email, the extension version shown in settings or at `chrome://extensions`, browser version, feature, approximate time and sanitized error/log screenshot. Never include passwords, seed phrases, private keys, Telegram bot tokens, or full license keys.

Installation instructions are based on the official Chrome unpacked-extension workflow: developer.chrome.com/docs/extensions/get-started/tutorial/hello-world.
