

AKEELAH TRADING ACADEMY

Features & Plans

A practical guide to the three tiers

Customer edition | Applies to the current release

Keep this guide with your downloaded extension. Use Simulation mode before enabling real execution.

Plan comparison

The same extension package serves all three plans. Akeelah's server validates the license and unlocks the permitted features. Prices are USD per month; Stripe displays any applicable additional charges at checkout.

Feature	Essential \$99	Pro \$199	Elite \$299
Market Buy / Sell	Included	Included	Included
Buy Limits / Sell Limits	Included	Included	Included
Stop Loss / Take Profit	Included	Included	Included
Multiple / Laddered TP	Included	Included	Included
Simulation	Included	Included	Included
Standalone Trailing Stops	-	Included	Included
Automatic Trailing Profit	-	Included	Included
Bag Cleanup / P&L Cleanup	-	Included	Included
Token Swap	-	Included	Included
Telegram Signal Trading	-	-	Included
Multiple Channel Allowlist	-	-	Included
Signal Filters / Automatic Entries	-	-	Included
Scheduled Telegram Entries	-	-	Included

FOMO Trending Monitor, Trending Auto Entries, Acceleration Scanner, New Launch Sniper and Sustained Momentum are not part of the current release. Do not use screenshots or marketing claims from older research builds.

What each plan adds

Essential: structure entries and exits with conditional buy/sell levels, stop instructions, profit targets and independent ladder orders. Use simulation to inspect the execution workflow. It does not provide Pro portfolio tools or Elite signal automation.

Pro: adds trailing management, loss/profit cleanup rules and two-leg swaps. Trailing is based on observed market cap. Cleanup is a reviewed action, not a promise that untradable dust can always be sold. Swap can finish with cash if the second leg fails.

Elite: adds recognized Telegram WATCH signals, a channel allowlist, filters, preset exits and entry schedules. The signal channel must be open/rendered in Telegram Web; selected closed channels are not monitored. Channel switching or scrolling older history can produce old candidates, so test with Telegram simulation and keep live auto-entries off during navigation. This is not an arbitrary-message AI interpreter, MT4 copier or cloud bot.

INTERFACE ILLUSTRATION - sample settings, not a live account or test result.

Akeelah FOMO Auto Trader

SIMULATION - monitored orders skip the final trade click

Trailing Stop

☐ Add a trailing stop to new automated buys

Activate at x
3

Trail below high by %
20

Sell % of remaining bag
100

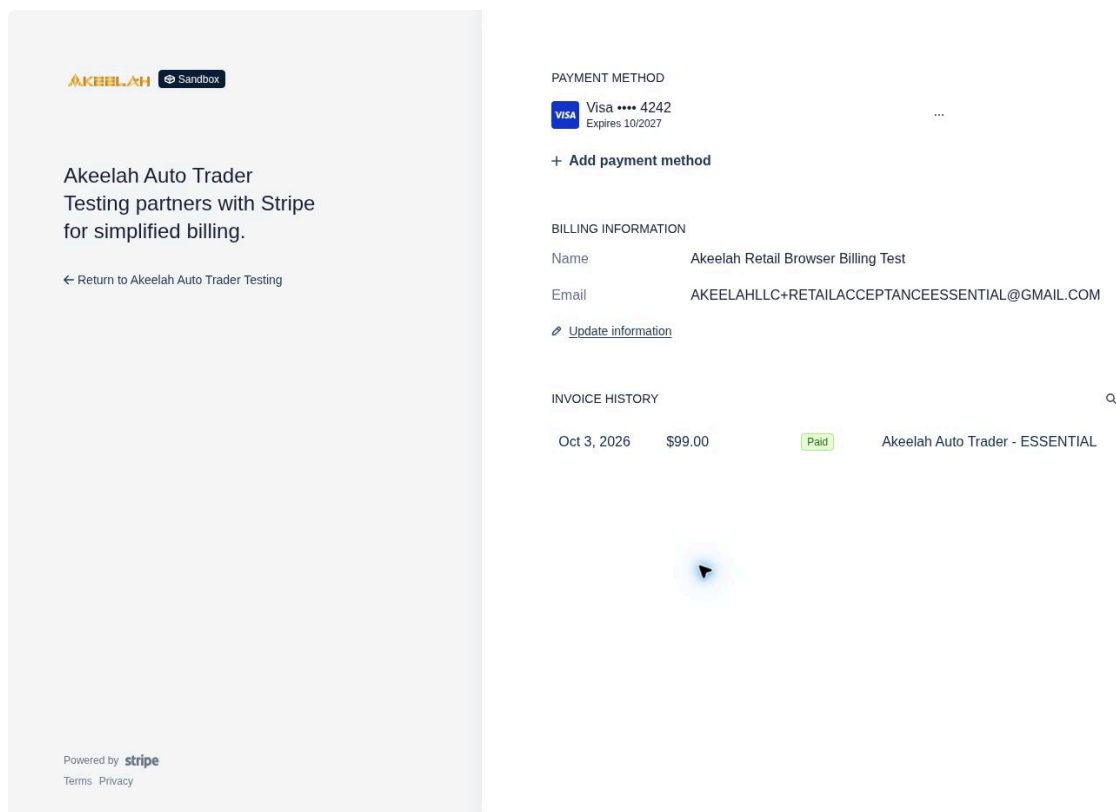

After activation, Akeelah tracks the highest observed market cap and only raises the trailing stop. It never moves the stop backward.

Controls and operating boundaries

Control	What it does	What it does not do
OFF	Stops automatic orders and Telegram buys; signals may be logged.	Reverse submissions or cancel Stripe billing
SIMULATION / LIVE	Simulation skips final clicks; LIVE asks for confirmation. New installs use SIMULATION.	Make native FOMO buttons safe or prove a future fill
Entry threshold	Attempts a market trade when observed conditions qualify	Place an exchange-hosted limit order
Entry schedule	Gates new Telegram entries by local day/time	Run with Chrome closed or stop existing exits
License recovery	Rotates a lost key and preserves binding	Transfer to another FOMO account

Browser execution depends on FOMO controls, account session, an open fomo.family tab, internet and observed data. Slippage, fees and market gaps remain. Every plan requires the customer to choose and review its strategy, amounts, settings and trades.

Actual Stripe sandbox billing example: customer details, payment method and paid invoice. The live portal also exposes eligible active-subscription controls.
